Health experts now recommend that **everyone 6 months of age and older** get vaccinated against influenza every year. Even healthy children and adults can get very sick from the flu, but certain people are at greater risk for serious complications if they get the flu, including:

- People 65 years and older
- Children younger than 5, but especially children younger than 2 years old
- Women who are pregnant or plan to become pregnant during flu season
- People with certain chronic health conditions like asthma and COPD, diabetes (both type 1 and 2), heart disease, neurological conditions, and certain other health conditions)
- Children 6 months to 59 months of age attending any child care center or preschool are required to receive a flu immunization annually between Sept. 1 and Dec 31 of each year
